27 October 2026

Dear Hiring team,

I’m applying for the Software Engineer III role on Kobo’s Web team. I’m a full stack engineer with four years at Reward, building and running web services for UK and Middle East banking clients with .NET/C#, Node.js, Angular and PostgreSQL. The role’s spread across the whole delivery cycle, from design through release and monitoring, is how I already work.

A few examples:

- I led the technical migration of email templates onto dedicated brand domains across four banking brands, using MJML and .NET Core, while preserving deliverability.
- I built full stack features across web and mobile, including a secure e-code resend flow with audit-logged resends and multi-bank email routing.
- I led a cross-team initiative to make an internal service testable: request validation, shared error handling, OpenAPI documentation, unit tests and stable GitHub Actions CI.
- I keep things healthy after release. I’m the go-to engineer for production incidents on my team.

You also mention mentoring and design proposals. I’ve mentored and onboarded four new starters, I run my team’s retrospectives, and I wrote our engineering guide for migrating to AWS SDK v3.

I’m based in Belfast and keen to confirm the role is open to candidates in Northern Ireland. I’d welcome the chance to talk.

Kind regards,

Padraig Lavery
